3. This application contains sequence disclosures that are encompassed by the definitions for nucleotide and/or amino acid sequences set forth in 37 CFR 1.821 (a)(1) and (a)(2). However, this application fails to comply with the requirements of 37 C.F.R. 1.821 through 1.825 for the reason(s) set forth on the attached Notice To Comply With Requirements For Patent Applications Containing Nucleotide Sequence And/or Amino Acid Sequence Disclosure.

This application fails to comply with the sequence rules because a copy of the "Sequence Listing" in **computer readable form** and a statement that the content of the paper and computer readable copies are the same, where applicable, include no new matter, as required by 37 C.F.R. 1.821(e) or 1.821(f) or 1.821(g) or 1.825(b) or 1.825(d) have not been supplied to the Office. Please see enclosed notice to comply and a sample statement for requesting the use of computer readable form from the parent application.
4. Claims 1-15 are pending.

### *Election/Restrictions*

5. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Art Unit: 1644

- I. Claims 1-3 and 6-15, drawn to a process for the production of egg yolk antibodies binding to small molecule organochlorine pesticide comprising immunizing the poultry birds with a hapten conjugate wherein the conjugate is **DDT-OH hapten** having binding properties to DDT, classified in Class 530, subclass 389.8.
- II. Claims 1-2, 4 and 6-15, drawn to a process for the production of egg yolk antibodies binding to small molecule organochlorine pesticide comprising immunizing the poultry birds with a hapten conjugate wherein the conjugate is **Octachloro cyclic hapten** having binding properties to Endosulphan, classified in Class 530, subclass 389.8.
- III. Claims 1-2, and 5-15, drawn to a process for the production of egg yolk antibodies binding to small molecule organochlorine pesticide comprising immunizing the poultry birds with a hapten conjugate wherein the conjugate is **2,4,5 trichlorophoxyacetic acid  $\beta$ -alanine** having binding properties to Hexachlorohexane, classified in Class 530, subclass 389.8.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the process of making egg yolk antibodies that that binds to distinct organochlorine pesticides that differ with their respect to their process steps and endpoints. Therefore, they are patentably distinct.

6. Because these inventions are distinct for the reasons given above and the searches are not co-extensive, restriction for examination purposes as indicated is proper.
7. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

Art Unit: 1644

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
